- Reinstall the express stairs on the north side of Grace (all

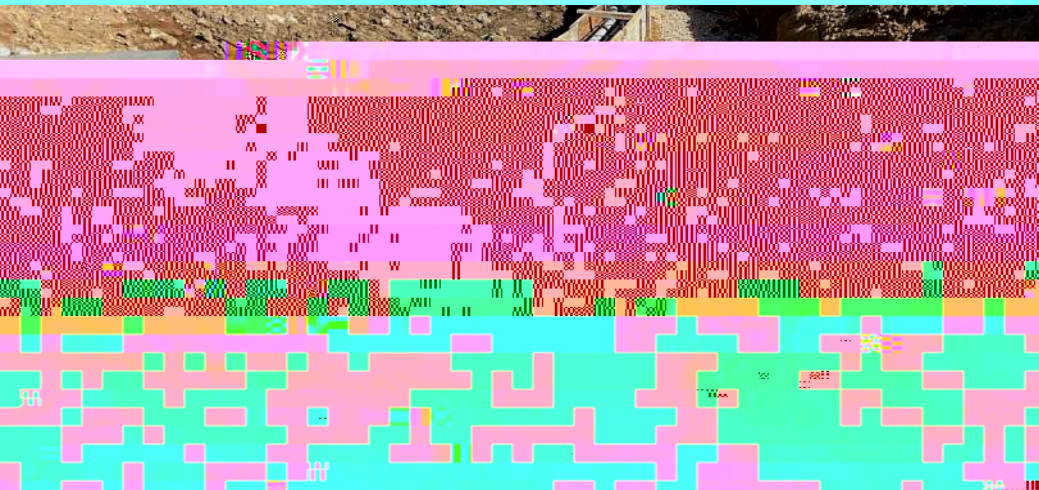

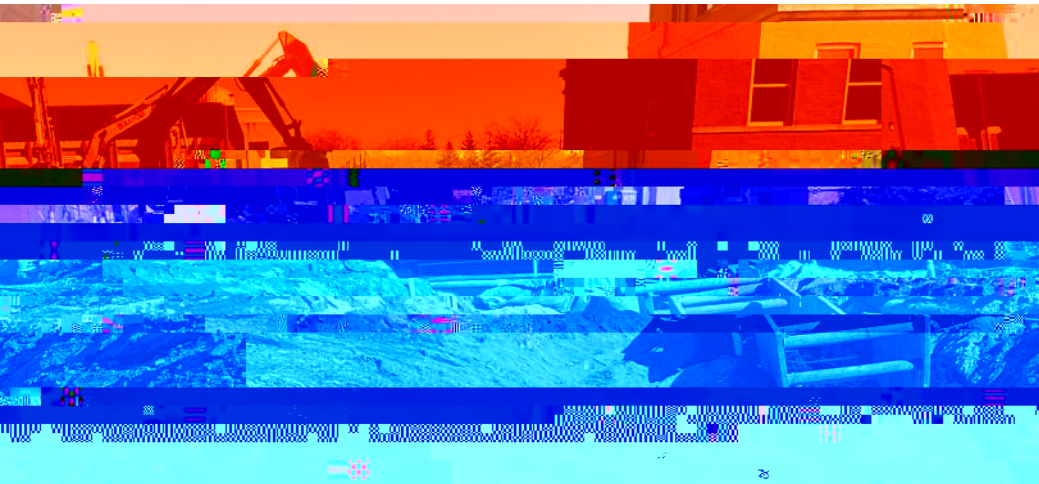

Sustainability – Arena Design Impact Reductions

IMPACT CATEGORY	DESCRIPTION	REDUCTION %
Global warming potential	When quantity of greenhouse gases in the atmosphere increases, the atmospheric layers near the earth are heated up.	1 %
Depletion of the stratospheric ozone layer	Stratospheric ozone layer protects flora and fauna against the sun's harmful UV-A and UV-B radiation.	1 %
Acidification of land and water	Leads to decomposition of root systems and leaching of nutrients from plants.	1 %
Eutrophication	When an excessive supply of nutrients generates unwanted plant growth such as algae in delicate ecosystems.	1 %
Formation of tropospheric ozone	Contributes in connection with UV radiation to the formation of ozone in the lower atmosphere (summer smog) which is damaging to the respiratory system.	1 %
Depletion of non-renewable energy resources	Process by which non-renewable energy resources such as fossil fuels (coal, oil and natural gas) are used up or exhausted.	1 %
